HIGH-PERFORMANCE TOOLING SYSTEMS

Precision at Scale. Durability by Design.

For professionals seeking minimum shrinkage and maximum durability, we provide the ultimate integrated mold manufacturing solution. By combining **Urethane-Modified Vinyl Ester** with **Zero-Shrink ISO/NPG** technology, we achieve a level of **dimensional precision** and **mold longevity** that defines the future of composite production.

Why This System?

High-volume production demands molds that can withstand repeated thermal and mechanical stress without losing their geometry. Our system delivers zero shrinkage and superior **resistance to cracking**, ensuring a repeatable, glossy surface quality every time. By integrating antistatic properties into the tooling process, we provide tool producers with safe and resilient systems that eliminate the risks associated with static discharge.

Key Components

Antistatic Tooling Gelcoat: Specifically engineered to neutralize electrostatic charge buildup at the surface, ensuring a safe and controlled production environment. It provides uniform surface resistivity achievable down to $10^4 \Omega/m^2$ delivering excellent results for precision mold manufacturing.

Urethane-Modified Vinyl Ester Gelcoat: Offers high gloss and extreme resistance to thermal shock, scratch resistance, and "print-through".

Urethane-Modified Vinyl Ester Resin: Provides the structural backbone with high mechanical strength, impact resistance, and superior thermal fatigue resistance. Its low exotherm and controlled curing behavior are ideal for structural reinforcement layers.

ISO/NPG Zero-Shrink Polyester: Delivers a stable morphology and zero shrinkage that preserves critical mold geometry. It ensures dimensional consistency and long service life.

Advantages

- **Unmatched Precision:** Zero shrinkage for absolute dimensional accuracy in every mold.
- **Operational Safety:** Significant reduction in static risks, protecting both employees and equipment.
- **Enhanced ROI:** Longer mold service life and a drastic reduction in maintenance and rework costs.
- **Surface Quality:** Stable, repeatable, and high-gloss finishes that define professional standards.

Manufacture molds of the future with today's advanced resin technologies
